Question 1

Correct

Mark 10.00 out of 10.00

Write a java program to create an abstract class named Shape that contains an empty method named numberOfSides ().

Provide three classes named Trapezoid, Triangle and Hexagon such that each one of the classes extends the class Shape. Each one of the classes contains only the method numberOfSides () that shows the number of sides in the given geometrical figures.

For example:

Result
Trapezoid has 4 Sides Triangle has 3 Sides Hexagon has 6 Sides

Answer: (penalty regime: 0 %)

```
abstract class Shape
{
   public abstract void numberOfSides();
}
   class Trapezoid extends Shape
   {
       public void numberOfSides()
       {
           System.out.println("Trapezoid has 4 Sides");
       }
   }
   class Triangle extends Shape
   {
        public void numberOfSides()
        {
           System.out.println("Triangle has 3 Sides");
        }
    }
    class Hexagon extends Shape
    {
       public void numberOfSides()
       {
          System.out.println("Hexagon has 6 Sides");
       }
    }
public class Main{
     public static void main(String args[]){
        Shape trapezoid = new Trapezoid();
        Shape triangle = new Triangle();
        Shape hexagon = new Hexagon();
        trapezoid.numberOfSides();
        triangle.numberOfSides();
        hexagon.numberOfSides();
     }
 }
```

	Expected	Got	
✔	Trapezoid has 4 Sides Triangle has 3 Sides Hexagon has 6 Sides	Trapezoid has 4 Sides Triangle has 3 Sides Hexagon has 6 Sides	✔

Passed all tests! ✔
