Question 1

Correct

Mark 20.00 out of 20.00

Write a Java program that demonstrates the use of I/O Streams to copy the contents of one text file to another. Your program should accept two file paths: the path of the source file and the path of the destination file.

Your task is to complete the `copyFileUsingStreams` method, using Java I/O Streams, to read the contents of the source file and write them into the destination file.

Please ensure the following:

1. Proper exception handling is implemented for file I/O operations.
2. Close the streams appropriately.

Your code should read the contents from "source.txt" and create "destination.txt" with the same content.

Note: For the purpose of this question, you don't need to prompt for user input within the main method. Simply use the provided method signature and perform the file copying operations within the `copyFileUsingStreams` method.

Remember to check for any necessary imports and ensure the proper handling of IOException.

Example:

Given "source.txt" with contents: "This is a test file for Java I/O Streams."

Upon running your program, "destination.txt" should be created with the same content as "source.txt".

For example:

Result
File copied successfully.

Answer: (penalty regime: 0 %)

Reset answer

```
public class FileCopier {
    public static void copyFileUsingStreams(String sourcePath, String destinationPath)
    {
        // Your code here
    }

    public static void main(String[] args) {
        // Accept the file paths from the user
        String sourcePath = "source.txt";
        String destinationPath = "destination.txt";

        copyFileUsingStreams(sourcePath, destinationPath);
        System.out.println("File copied successfully.");
    }
}
```

	Expected	Got	
✔	`File copied successfully.`	`File copied successfully.`	✔

Passed all tests! ✔
